

JOULE

Duquesne Energy and Environmental Law Journal Continues its Collaboration with the Students of Professor Neacșu's Spring 2023 and Spring 2024 Climate Change Law Classes

Since its inception, *Joule* Duquesne Kline Law School's Energy & Environmental Law Journal has served as a forum for both students and outside professionals to discuss legal ideas related to energy and environmental law, as its mission is to facilitate written work that insightfully inspires the local, state, and national community. In accordance with this, *Joule* collaborated with the students of Professor Dana Neacșu's Climate Change Law classes from both the Spring of 2023 and Spring of 2024. Students of this class were assigned the task of writing an article on important contemporary environmental topics, with climate change law being the particular focus. *Joule* is pleased to offer these students a platform to share their research and ideas addressing climate change and the environmental regulations.¹

Joule aims to be a valuable and important resource in the community for understanding energy and environmental law in Pennsylvania, the United States, and around the globe. Through this intentional collaboration, it not only presents an opportunity for reflection on the rapidly changing landscape of environmental issues facing the planet, but it also allows the original hard work of law students to be highlighted in the hopes that their insight will inspire others. *Joule* thanks and appreciates its readers for their interest in and attention to the topics discussed in the following articles.

¹ Although *Joule* is providing a platform for Professor Neacșu's Spring 2023 and 2024 Climate Change Law classes students' articles, the following collection of articles are independent from *Joule* and do not reflect the beliefs, opinions, or ideas of *Joule*.
